

SIL765/SIL7165: Networks & System Security

Semester 2, 2025–26

Project Guidelines

Project Endterm Progress

Exactly one member of each group is expected to make the following **two PDF** submissions on **Gradescope** and **one PPTX** submission on **Moodle**:

- **Paper Report:**

You are expected to document the final progress of your project work. Please create a [L^AT_EX](#) doc and submit a PDF file containing the following sections:

- **Title**
 - * Length: 5–10 words.
 - * The title should be creative and catchy, while capturing the technical scope of the paper.
- **Name and Entry Number of Group Members**
- **Section 1: Introduction**
 - * Length: 500–1000 words.
 - * This should contain the following subsections: Area, Problem, Solution, Evaluation and Takeaway.
- **Section 2: Background and Related Work**
 - * Length: More than 500 words.
 - * The background should contain the important information needed to understand the area of work.
 - * The related work should cite 5–10 references (in IEEE format) that have the solutions closest to the proposed solution.
 - * It should contain a table illustrating a qualitative comparison of existing solutions and their limitations. There must be a dedicated last row for your solution, depicting how it compares with and overcomes the above mentioned existing solution(s) and their limitation(s).
- **Section 3: Problem Statement**

- * Length: 500–1000 words.
- * A system model providing a formal description of the various entities and their interaction in the system under study.
- * A threat model describing the attacker’s capabilities and goals, and potential threats and defenses to the system.
- * A list of key challenges faced during the implementation or design of such a system and/or its solution.
- **Section 4: Proposed Solution and Extensions**
 - * Length: More than 500 words.
 - * Briefly describe your selected research paper’s solution. Explicitly mention your extensions to the proposed solution, that you have implemented successfully, in an elaborate fashion.
 - * 1–3 relevant figures/tables must be present.
- **Section 5: Completed Evaluation**
 - * Length: More than 500 words.
 - * Elaborate your Midterm and Endterm implementations separately.
 - * Formally mention your experimental setup (if any).
 - * Qualitative and Quantitative comparison of your extended work, with existing solution and its results.
- **Section 6: Future Work**
 - * Length: More than 250 words.
 - * Mention the limitations/drawbacks of your extended solution (if any).
 - * Mention the possible future work/extensions that can be implemented over your extended solution.
- **Section 7: Conclusion**
 - * Length: 150–250 words.
 - * Summarize the entire project in brief.
- **References**
 - * Number: 10–15.
 - * Format: IEEE. You can read more about citing references in L^AT_EX from [here](#).

The deadline for submitting this over **Gradescope** is **24th April 2026, 23:59**.

- **Paper Presentation:**

Please create a PPTX file and a PDF file, using [Microsoft PowerPoint](#) satisfying the following criteria:

- **Title**
 - * Length: 1 slide.

- * Ensure that you mention the course code, course name, project title, group member details, instructor's name and date.
- **Introduction**
 - * Length: 1–3 slides.
 - * Should provide an overall motivation and introduction to the problem.
- **Background**
 - * Length: 1–3 slides.
 - * Should provide a brief overview of all the necessary technical concepts required to understand the project.
- **Related Work**
 - * Length: 1–3 slides.
 - * Should provide a tabular comparison of all the state-of-the-art related works/closest solutions, their limitations and how your solution overcomes their limitations.
- **Problem Statement**
 - * Length: 1–2 slides.
 - * Should contain the System Model and the Threat Model.
- **Proposed Solution and Extensions**
 - * Length: 2–3 slides.
 - * Should explicitly highlight the solution proposed by the research paper and your extensions/contributions.
- **Completed Evaluation**
 - * Length: 2–3 slides.
 - * Should provide details of all the work completed on the project by you so far and their respective evaluation metrics and results. The midterm and the endterm work should be explained separately.
- **Future Work**
 - * Length: 1 slide.
 - * Mention the possible future work(s) on your existing extended solution.
- **Summary**
 - * Length: 1 slide.
 - * Should summarize the entire project.
- **References**
 - * Length: 1–2 slides.

The deadline for submitting this over **Gradescope (PDF)** and over **Moodle (PPTX)** is **24th April 2026, 23:59**.

Note: Remember, a good PPT is one that can explain a lot with as less text as possible. It is recommended to use animations, diagrams and flowcharts to explain complex parts of the PPT to the viewer and the presenter should depict strong communication skills to express ideas clearly.
